# The Shift from Power to Application

- The market is **saturated with AI models**, from Big Tech to open-source initiatives.
- Companies will compete **not by building models** but by **how well they integrate AI into their workflows**.
- The future of AI will focus on **fine tuning, customization, and real world implementation** rather than just performance benchmarks.

The AI landscape is evolving quickly.  
Before long, success won't be about  
choosing the best model, but it'll be about  
how effectively we integrate AI into our  
workflows.

**What do you think?**

Hope this was helpful!
